

Division of Health Sciences, Faculty of Medicine

Health Sciences is the academic field for the preservation of good health. In other words, it's the scientific field dealing with physical, mental, and emotional health. Society needs nurses and medical engineers active in clinical practice with expertise and knowledge, with a strong will to creatively open the way to future medical treatment. For that purpose, nurses and medical engineers need basic natural scientific knowledge, logical thinking, and plenty of common sense. For people to stay healthy, nurses and medical engineers need to be engaged in not only curing diseases as has been the case in the past, but also in disease prevention, recuperation after treatment, and maintenance and enhancement of health for the average people.

Based on Osaka University Admission Policies, the Division of Health Sciences, Faculty of Medical Sciences, seeks to enroll energetic individuals capable of opening new frontiers in medical science as practical scholarship as well as individuals enthusiastically pursuing ideals of medical science as theory.

It must be remembered that health is not an issue for one nation alone; therefore, a global viewpoint is needed. The Division of Health Sciences welcomes persons with broad perspectives who are willing to contribute to the world. In particular, the school seeks individuals who are interested in people and view them sympathetically. The Division of Health Sciences welcomes the following types of students:

1. Individuals who are willing to carve out new paths in health sciences, medical science, and technology.
2. Individuals interested in putting health sciences into practice in cooperation with persons in other fields.
3. Individuals capable of thinking of individuals and groups from an international viewpoint.
4. Individuals with a high sense of morality and rich humanity.

In order to select such students, the school selects students in a comprehensive way through examinations made by the National Center for University Entrance Examinations, the Individual Achievement Examinations, and an interview.
